

Policy statement: "Quality, Safety, Health and Environment"

Cryoworld is a customer-oriented company in the field of design and manufacturing of cryogenic products. Our policy is focused on ensuring the continuity and economic success of the company. We want to achieve this by performing our work in a qualitative, safe and environmentally responsible manner and by promoting the working conditions, safety and health of all employees in accordance with customer expectations and specifications as well as (legal) requirements, regulations and codes.

A project-based and safe approach, the feed-back of our customers and a critical assessment of ourselves, will make our products and services of high quality, safe and attractive for our customers, through mutual trust in the cooperation.

We work with a safety and quality management (VKM) system that complies with the ISO 9001: 2015 and the VCC checklist for contractors, for guaranteeing and regularly assessing the objectives set by us.

Our policy is focused on maintaining and continuously improving the effectiveness of the VKM system. The care for safety, health, working conditions and well-being of employees and third parties has a high priority within the organization and is achieved by complying with the (Arbo) legislation and regulations and the prevention of personal injury, material and environmental damage.

The processes and products are regularly checked based on process indicators and product specifications, which are laid down in the annual business plan and / or the management system assessment report.

The policy is reviewed every 3 years and made known to all employees by including it in this manual, through meetings and announcements and also by publishing a part in the "House Rules & Safety Rules" of Cryoworld BV.

Goals

The objectives are elaborated in the annual business plan and will be critically reviewed and if necessary adjusted by the Board of Management based on the policy.

These objectives are reviewed annually in a management system assessment (MR) by the Management Board and those involved.

The status and realization of the objectives are included in a management system assessment report (MR report)
